PRESENTATION OUTLINE

01

Introduction

Problem context & the ArguMate concept

02

Literature Review

Analysis of existing debate platforms

03

Problem Statement

What gap ArguMate fills

04

Objectives

Goals of the platform

05

Methodology

Tech stack & system workflow

06

UI / Frontend Progress

Completed design showcase

07

Results & Outcome

Achievements this semester

08

Future Work

Roadmap & next steps

INTRODUCTION

MANUAL SYSTEMS

Topics decided manually

Teams formed by hand

Scores on paper or Excel

No built-in timer

THE PROBLEM

Confusion & delays

Human errors

Lack of transparency

Wasted organizer time

DIGITAL SOLUTION

ArguMate automates
topics, teams, timers,
scoring & leaderboards
in one platform

ArguMate is a smart, all-in-one debate management platform for colleges & debate clubs

LITERATURE REVIEW

Category	Existing Platforms	ArguMate ✓
Platform Purpose	MUN OR debates (not both)	Supports Debates AND MUNs
Event Management	Manual registration & rounds	Fully automated event flow
Topic Generation	Manual — no automation	Auto-generates by category
Team Formation	Manual assignment	Auto-splits For / Against
Timer & Speech	External stopwatch needed	Built-in per-speaker timer
Scoring	Paper / Excel — error-prone	Digital, criteria-based scoring
Results	Manually calculated, slow	Instant leaderboard display
Transparency	Bias can occur	Structured, fair evaluation

PROBLEM STATEMENT

"There is no unified digital system that automates debate topic generation, team allocation, timing, scoring, and result management in educational institutions."

No unified system

Topic generation, team creation, scoring, and feedback are all scattered across different tools.

Manual errors

Scoring on paper or Excel leads to mistakes, delays, and unfair outcomes.

Lack of transparency

Judges may be inconsistent; no structured criteria exists for most college debates.

Student disengagement

Complex logistics discourage participation — especially for first-timers.

OBJECTIVES

01

Simplify Event Management

Create an easy-to-use platform for organizing debates and MUN events from start to finish.

02

Automate Repetitive Tasks

Auto-generate topics, divide teams, and calculate scores — eliminating manual busywork.

03

Ensure Fair Evaluation

Structured digital scoring criteria ensures judges remain consistent and transparent.

04

Boost Student Participation

Lower barriers to entry so more students engage confidently in academic debates.

05

Single Unified Platform

Replace the patchwork of paper, timers, and spreadsheets with one integrated system.

METHODOLOGY & TECH STACK

USER FLOW

MODULES

TECHNOLOGY STACK

Architecture: Frontend → Backend (Flask API) → Database (SQLite)

UI / FRONTEND PROGRESS

Features Implemented:

- Topic display & auto-generation section
- User input fields for posting arguments
- Team display — FOR vs AGAINST panels
- Judging panel with scoring inputs (Fluency, Grammar, Speed)
- Score calculation interface
- Teacher & Student mode views

UI/UX

COMPLETE

Workflow

Backend

NEXT PHASE

Deployment

PLANNED

Live Demo: github.com/yanasareen/Argumate-

RESULTS & OUTCOME

RESULTS ACHIEVED SO FAR

 UI/UX Design Completed

 System Workflow Finalized

 Feature Architecture Defined

 Literature Review Done

 GitHub Repository Active

SEMESTER OUTCOME

 Frontend Fully Developed

 Project Structure Clearly Defined

 Tech Stack Decided

 Backend-Ready Architecture

 Presentation & Report Prepared

FUTURE WORK

01 AI-Based Topic Generator

Use LLMs to generate contextually relevant, dynamic debate topics by category and difficulty level.

Phase 2

02 Backend Development

Implement Python Flask REST API with full database integration for user management, scores, and events.

Phase 2

03 Judge Login System

Role-based access for judges, organizers, and participants with secure authentication.

Phase 2

04 Voice Modulator

Real-time speech analysis to give feedback on pace, clarity, and filler word usage.

Phase 3

05 Cloud Hosting

Deploy on cloud (AWS/GCP/Render) for remote access, scalability, and 24x7 availability.

Phase 3

06 Real-Time Deployment

Live multi-room debates with real-time updates, live leaderboards, and simultaneous judging.

Phase 3
